AIR

The key to
smooth diagnostics
in your hand.

Autocom AIR

AIR is an application that helps you discover potential issues with used vehicles. Perform diagnostics online with a mobile phone or tablet (Android).

You can keep track of the vehicle's health and avoid making bad car purchases. You receive real-time information from the vehicle with just a few clicks.

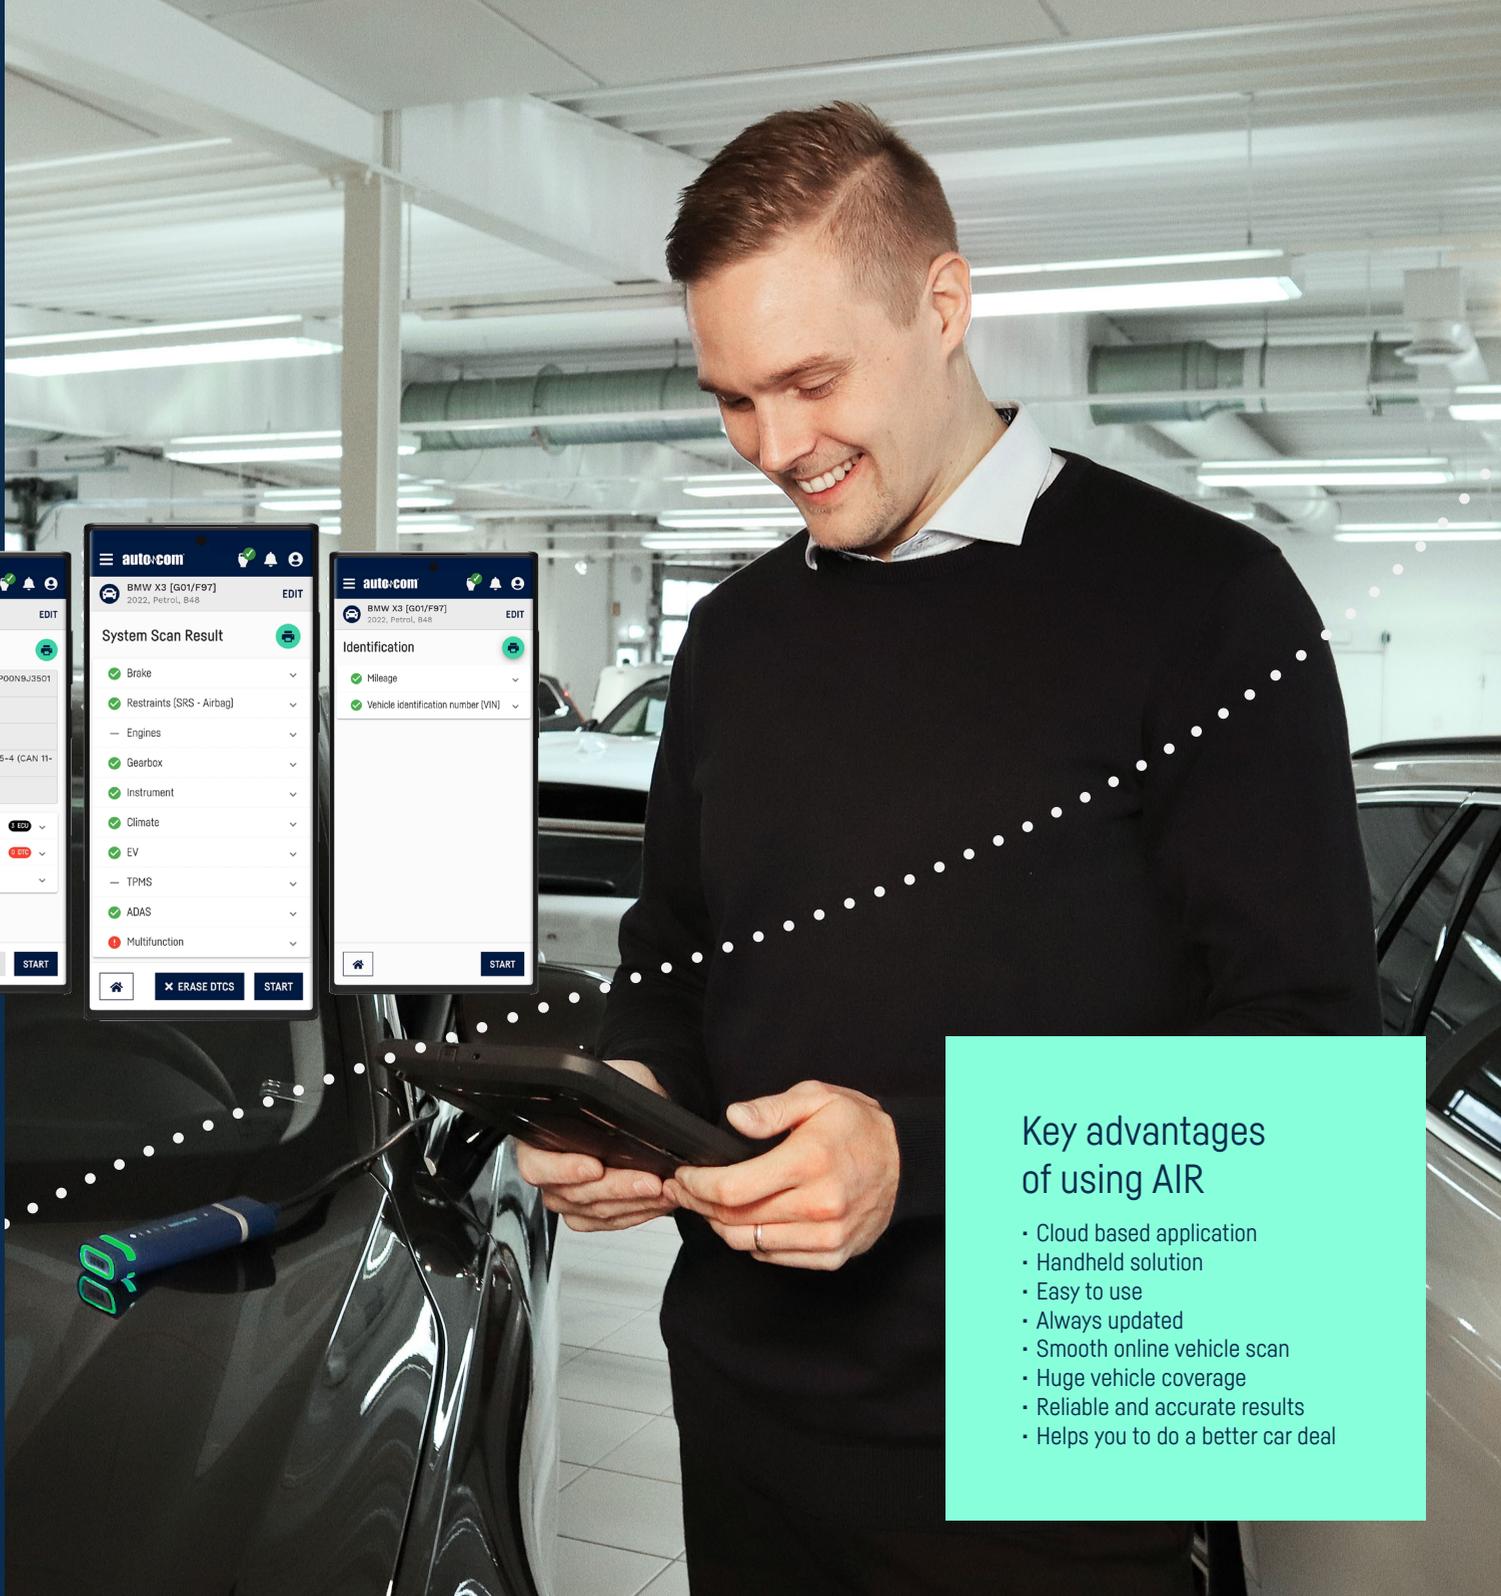

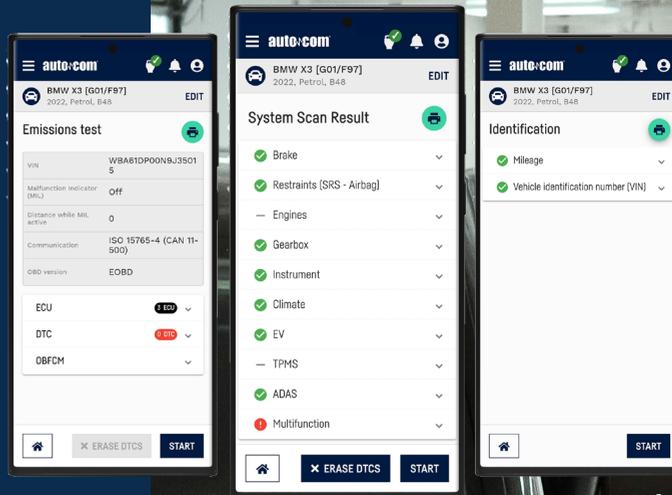

Detect possible vehicle manipulation and problems

With the help of AIR you can get an indication of whether someone has tampered with the vehicle. You can also find out if there are any technical issues with the car.

With AIR you can:

- ✓ Read fault codes
- ✓ Erase fault codes
- ✓ Detect possibly manipulated odometers
- ✓ Check VIN in the vehicle control units
- ✓ Perform EOBD readouts
- ✓ Check fuel consumption [OBFCM]*

A great solution for car dealers, vehicle importers, auction houses and others.

Key advantages of using AIR

- Cloud based application
- Handheld solution
- Easy to use
- Always updated
- Smooth online vehicle scan
- Huge vehicle coverage
- Reliable and accurate results
- Helps you to do a better car deal

* On Board Fuel Consumption Monitoring

Three main sections

System Scan

An easy scan that read and present diagnostic fault codes (DTC) from all available systems on the vehicle. You get a quick overview of the actual status of the entire vehicle. You can also easily erase the fault codes.

You can also perform additional diagnostic tests to further assess the condition of the vehicle.

Emissions test

Perform EOBD readouts and check fuel consumption (OBFCM). It helps you ensure that the vehicle is environmentally responsible and compliant with emission regulations.

Get real-time insights into the vehicle's emission performance so that you can take proactive steps to reduce the vehicle's carbon footprint.

Identification

Check the Vehicle Identification Number (VIN) in the vehicle control units and detect possibly manipulated odometers. Perform a full scan of the vehicle and get a complete fraud detection report.

Compare mileage data from different control units to identify potential discrepancies. In this way you can make a better vehicle deal and prevent potential fraud.

Access to 40,000 systems

AIR uses our extensive database from our vehicle diagnostic software CARS.

It has about 40,000 specific systems on about 70 different brands. A unique vehicle coverage that increase continuously via online updates.

AIR can be used on both passenger cars and light commercial vehicles and on all kind of fuel types, as well as electric and hybrids.

How to get started

1. Contact an official Autocom distributor to get an AIR license and an ICON (our vehicle communication interface).
2. Download Autocom AIR at Google Play Store to your Android smartphone or tablet.
3. Create an account via the link you received after your purchase and sign in with your credentials.
4. Add your ICON in the app and configure your device with a Wi-Fi network.
5. You are now up in the AIR and can perform diagnostics.

Scan the QR code and download AIR to your Android device.

The dilemma of a car dealer

Imagine that you are a car dealer. You are thinking about whether you should buy the car that you have in front of you, or not.

The owner says that it is in “mint condition” and that it is a low mileage vehicle. The odometer back up the story from the seller. But you are sceptic. The worn steering wheel and the bad pedal rubber tell you the opposite.

How can you check what is right and wrong here? You would also like to check if there are any fault codes on the vehicle before you decide to make any deal. But you have no technician to help you.

This is where AIR comes into the picture. Together with the diagnostic hardware ICON, AIR can quickly and easily check the status of the car with an Android device. You can check the ID of the car, read fault codes and see actual mileage in a few clicks.

AIR makes your decision much easier and helps you to avoid less favourable car deals.
